Dorte Ekelund Delegate of the Minister 12 May 2014

## **SCHEDULE**

## Public Place Names (Beard) Determination 2014 (No 1)

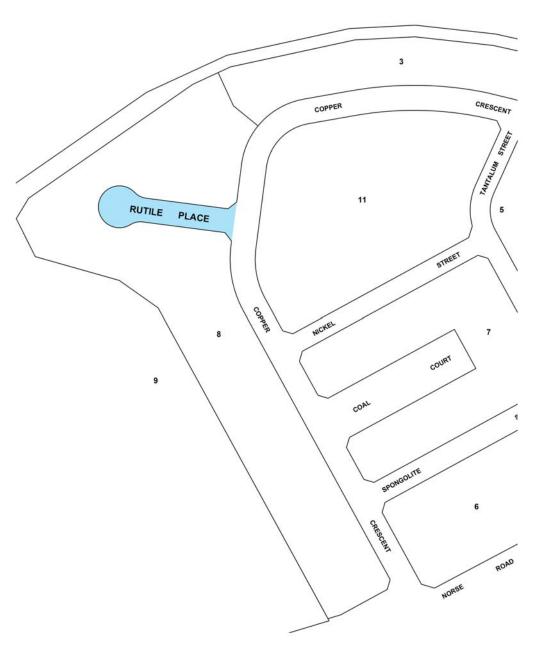

Division of Beard - Australian geological resources

| NAME                | ORIGIN | SIGNIFICANCE   |
|---------------------|--------|--|
| <b>Rutile Place</b> | Rutile | Mineral sands resource   |
|                     |        | Australia is a world leader in the production of rutile, a titanium oxide mineral that is commonly found in granites, pegmatites and metamorphic rocks. It is also found in sands from the weathering of these rocks and is a common mineral in the alluvial sands |

Almost all rutile produced is processed into non-toxic white titanium dioxide pigment for use in the manufacture of paints, plastics, paper, ink, rubber, textiles, cosmetics, leather and ceramics. It is also used to produce titanium metal.

that are dredged for magnetite and ilmenite.
